

Connection PRO11-VAQ

- 1 The PRO11 consists of two PRO7 tanks which are fitted in-line and linked with the connector as shown in the diagram. For further installation of the PRO11-VAQ please follow the general installation instructions.

- 2 Connector 1/2" – M12 x 1.25
- 3 Connect the water inlet hose of the first tank to the water mains via the inlet combination as described in the installation manual. Then use the connector and fibre rings to connect the water outlet hose of the first tank to the water inlet hose of the second tank. The water outlet of the second tank is then connected to the boiling water tap as shown in the installation manual. Each tank requires its own 230V power supply.
